Verify in 30 seconds

Prove the pack is unmodified

Steps

1) Open START_HERE.html (in the Challenge Kit) and click “Verify the authentic pack”.

2) To verify any downloaded pack, click “Choose a modified pack folder” and select the unzipped folder.

3) Or verify via terminal: python3 verifier/verify_pack.py <path-to-pack-folder>

What you should see:

• Pinned public key: OK

• Manifest signature: VALID

• File hashes: VALID

If you change anything (JSON, PDF, even whitespace), verification FAILS — by design.

Trust anchor

Pinned public key fingerprint:
dd9d33125dc660cd4bdee3e8ae6093ad17ab18b9fc3b7beecb05eed46f26fe0d

If you see a different fingerprint, you are not verifying against Judgement Spine’s published trust anchor.
